EDUCATION

University of Virginia, Charlottesville, VA

August 2023 - May 2026

B.A. Computer Science, Minor in Data Science | GPA: 3.96

- *Relevant Coursework:* Natural Language Processing, Machine Learning, Artificial Intelligence, Security of AI Systems, Reinforcement Learning, Software Engineering, Data Structures and Algorithms, Discrete Math, Statistics, Linear Algebra

SKILLS

- *Programming Languages:* Python, Java, JavaScript, TypeScript, C#, C, C++, R, SQL, HTML, CSS
- *Tools and Frameworks:* Git, React, Django, .NET, REST APIs, Amazon S3, Docker, JIRA, CI/CD, Unit Testing, Agile

EXPERIENCE

Software Engineering Intern, Telestream, Sterling, VA

May - August 2025

- Created an Adobe Premiere Pro panel plugin (React / TypeScript) for integrated control within Premiere of external video workflow processing softwares via proprietary REST APIs, using Adobe UXP and Premiere Pro APIs.
- Developed a unified panel UI using the Spectrum Web Components library with React components for domain-specific UI needs, including video timecode and framerate control.
- Implemented a C dynamic library and REST API for sending/receiving workflow progress updates from Adobe Media Encoder.

Software Engineering Intern, Telestream, Sterling, VA

May - August 2024

- Designed and implemented a resilient video SDI router management system (C# / ASP.NET Core), with a unified REST API for router control, interactive frontend, and caching mechanisms to optimize system performance and availability.
- Wrote code implementing proprietary vendor protocols over TCP sockets to control multiple types of video SDI router devices.
- Produced architectural and design artifacts (UML, sequence diagrams) to guide system development and maintenance.

Head Teaching Assistant for CS 3140: Software Development Essentials

August 2024 - May 2026

University of Virginia Computer Science Department, Charlottesville, VA

- Supported delivery of a 400+ student course on key topics in software development, creating and organizing course resources, delivering guest lectures, and grading assignments and exams.
- Co-authored the digital textbook for the course, contributing to sections on architectural patterns, DBMS, and GUIs.
- Assisted students with homework assignments and course topics through interactions during weekly office hours.

Research Assistant, UVA Human AI Technology Lab, Charlottesville, VA

August 2025 - Present

- Review literature on algorithmic composition and emotional affectivity across different musical forms to support new studies focused on communicating user behavioral data through musical compositions.
- Develop a sonification algorithm and framework (Python) to map patient screen usage metrics to parameterized audio signals and generate representative compositions, based on user-specified digital health goals and listening preferences.

PROJECTS

Cross-Dialect Robustness Analysis of GPT and Gemini Models

January 2026 - Present

- Designed an experimental evaluation pipeline to measure performance gaps of modern LLMs (GPT-4o, GPT-4o-mini, Gemini 2.5 Pro) across reasoning tasks expressed in underrepresented English dialects, using the EnDive benchmark.
- Built a reproducible Python framework for optimized benchmarking (1000+ examples per task), including prompt construction, response scoring, progress monitoring, and logging, interfacing with OpenAI and Google GenAI APIs.
- Assessed effectiveness of inference-time mitigation strategies (instruction framing, dialect normalization, few-shot exposure) in reducing dialect-related accuracy gaps, quantifying task-specific sensitivity and semantic drift trade-offs.

Girls Who Innovate Network (GWIInnet)

May 2025 - Present

- Secured \$10,000 in funding from *The Jefferson Trust* to support platform development and scaling.
- Lead full-stack developer for the *GWIInnet*, a social networking web application (Django / PostgreSQL) for young female entrepreneurs to grow early-stage project ideas and build entrepreneurial skills through free multimodal learning modules.
- Build production-ready infrastructure with Google OAuth for user authentication, Amazon S3 for media storage, and an automated CI/CD pipeline via Heroku + GitHub Actions to ensure secure, scalable, and maintainable development.
